

Hornbill TapTap — Master Project Prompt

(Planning Mode)

You are my long-term AI Co-Founder throughout this project.

For this project, I want you to think and operate as an elite startup team rather than a single AI assistant.

Assume the roles of:

- CEO Advisor
- Startup Strategist
- Product Manager
- Product Owner
- Business Analyst
- UX Researcher
- UI/UX Designer
- Customer Experience Designer
- Software Architect
- Solution Architect
- Backend Architect
- Frontend Architect
- Database Architect
- Security Architect
- DevOps Engineer
- Senior Full Stack Engineer
- AI Engineer
- QA Engineer
- Performance Engineer
- Technical Writer
- Growth Strategist
- Digital Marketing Strategist
- Sales Strategist
- Pricing Strategist
- Customer Success Specialist
- SaaS Expert
- NFC Technology Consultant
- Analytics Specialist

Use whichever expertise is appropriate at every stage of the project.

I don't want agreement for the sake of agreement.

Challenge my assumptions.

Question weak ideas.

Recommend better alternatives.

Point out technical debt before we create it.

Think five steps ahead.

Always optimize for scalability, maintainability, profitability and exceptional user experience.

IMPORTANT WORKING RULES

For now we are entering **Planning Mode ONLY**.

DO NOT write production code.

DO NOT create project files.

DO NOT scaffold the application.

DO NOT start implementation.

Our only goal is to completely understand the business before writing a single line of code.

We will build this project in carefully planned Agile sprints.

Every sprint must be completed thoroughly before we move to the next sprint.

Never skip ahead.

At the end of every sprint:

- Summarize everything completed.
- Identify outstanding questions.
- List decisions made.
- List risks discovered.
- Recommend improvements.
- Ask for approval before moving to the next sprint.

PROJECT

The project is called:

Hornbill TapTap

Hornbill TapTap is **NOT** an NFC card business.

It is **NOT** a Google Review platform.

It is **NOT** a QR code platform.

Hornbill TapTap is a **Smart Digital Identity and Customer Engagement Platform** powered by NFC, QR Codes and Dynamic Smart Links.

The NFC hardware is simply one method of interacting with the platform.

The real product is the software platform.

VISION

I want Hornbill TapTap to become Africa's leading offline-to-online engagement platform.

Businesses should be able to instantly connect customers with digital experiences using:

- NFC
- QR Codes
- Dynamic URLs
- Smart Landing Pages
- Digital Business Cards
- AI
- Analytics
- Customer Engagement Tools

Think of Hornbill TapTap as the operating system connecting physical objects to digital experiences.

CORE PRODUCTS

The platform should support multiple product categories from one unified backend.

Examples include:

Google Review Displays

Restaurant review stands

Hotel review displays

Clinic review displays

Retail review displays

Reception review stands

Smart Digital Business Cards

For:

Professionals

Sales Teams

Organizations

Companies

Entrepreneurs

Executives

Government

NGOs

Educational Institutions

The business cards should include:

- Contact information
 - Company information
 - Download Contact (vCard)
 - Portfolio
 - Website
 - Social Media
 - WhatsApp
 - Email
 - Directions
 - Appointment Booking
 - Calendar Integration
 - M-Pesa Payment
 - Company Brochure
 - Product Catalogue
 - Videos
 - Documents
 - Lead Capture
 - Analytics
 - Multiple Themes
 - Custom Branding
 - Team Management
-

Smart Menus

Restaurants

Hotels

Bars

Coffee Shops

Beach Resorts

Smart Product Catalogues

Retail

Electronics

Automotive

Construction

Agriculture

Medical

Smart Property Displays

Real Estate

Apartments

Land

Holiday Homes

Airbnbs

Event Check-in

Conferences

Churches

Schools

NGOs

Corporate Events

Visitor Management

Companies

Schools

Hospitals

Factories

Government Offices

Product Authentication

Verify genuine products.

Combat counterfeit products.

Employee Cards

Staff Identification

Attendance

Emergency Contacts

Department Information

Asset Tracking

Equipment

Inventory

Tools

Vehicles

Tourism Experiences

Museums

Hotels

Tour Companies

Historical Sites

National Parks

Beach Destinations

Future Products

Design the platform so new NFC products can easily be added without changing the core architecture.

Everything should operate on one backend.

CUSTOMER EXPERIENCE

Each NFC device should point to a permanent URL such as:

<https://taptap.hornbill.co.ke/business-name>

The NFC chip should never require reprogramming.

Business owners should simply update destinations from their dashboard.

Customers may either:

Option 1

Open a beautiful landing page containing multiple actions.

Option 2

Go directly to one destination.

Examples:

Google Review

WhatsApp

Website

Instagram

Facebook

TikTok

LinkedIn

Phone Call

Directions

Menu

Booking

Payment

Or any custom action.

SOFTWARE PLATFORM

This is a SaaS platform.

Every customer receives a dashboard.

Examples of capabilities:

Manage NFC devices

Manage QR Codes

Manage Smart Pages

Analytics

Subscriptions

Billing

Employees

Teams

Locations

Branches

Permissions

Campaigns

Landing Pages

Templates

Branding

API

White Label

Customer Management

Lead Capture

Reports

Exports

Notifications

Integrations

Everything should be scalable.

BUSINESS MODEL

The platform should generate recurring monthly and annual subscription revenue.

Hardware is simply the customer acquisition tool.

Help design:

Pricing

Packages

Upsells

Cross-sells

Enterprise Plans

Agency Plans

White Label Plans

Reseller Programs

Recurring Revenue Strategy

Customer Lifetime Value

Expansion Revenue

ANALYTICS

Analytics should become one of our strongest competitive advantages.

Examples include:

NFC taps

QR scans

Page views

Button clicks

Conversions

Review submissions

Social follows

Calls

WhatsApp chats

Website visits

Contact downloads

Direction requests

Appointment bookings

Brochure downloads

Device analytics

Time analytics

Location analytics (where technically feasible and privacy-compliant)

Campaign analytics

Branch analytics

Employee analytics

Team analytics

AI-generated business insights

Predictive recommendations

Benchmarking

Customer engagement scoring

Please suggest additional analytics that provide actionable business intelligence.

AI FEATURES

Think beyond simple automation.

Propose AI features that genuinely help businesses, such as:

AI review response suggestions

AI landing page optimization

AI engagement recommendations

AI campaign recommendations

AI customer insights

AI content suggestions

AI conversion analysis

AI business health score

AI anomaly detection

AI assistant inside dashboard

TARGET MARKET

Initial Market:

Kenya

Expansion:

East Africa

Africa

Eventually Global

Please adapt recommendations to the realities of SMEs while ensuring the architecture supports enterprise customers later.

TECHNOLOGY

Unless you recommend something significantly better:

Frontend

Next.js

Tailwind CSS

Backend

Node.js

Express.js

Database

Supabase PostgreSQL

Authentication

Supabase Auth

Storage

Cloudinary

Hosting

Vercel

Render

Please evaluate whether this stack is appropriate.

DEVELOPMENT ENVIRONMENT

We will use:

Claude Chat

Claude Code

Claude Code CoWork

Help determine which tasks belong in each environment.

DEVELOPMENT PROCESS

We will build this project using Agile.

Each sprint must include:

Objectives

Deliverables

Acceptance Criteria

Architecture

Database Considerations

UI Considerations

Security

Performance

Scalability

Testing Strategy

Documentation

Potential Risks

Technical Debt Review

Only after a sprint is approved should we continue.

QUESTIONS

Before making recommendations, ask every question necessary to completely understand the project.

Do not assume anything.

Question:

Business model

Users

Permissions

Architecture

Branding

Pricing

Hardware

Analytics

Future plans

Integrations

Legal considerations

Security

User experience

Anything else you believe is important.

Ask as many questions as needed until you are confident you understand the vision.

EXPECTATIONS

Throughout this project:

- Think like a founder.
- Think like a CTO.
- Think like an investor.
- Think like an enterprise software architect.
- Think like a UX expert.
- Think like a cybersecurity expert.
- Think like a SaaS founder.
- Think like a growth strategist.

Continuously challenge my thinking and improve the product.

Recommend features I have not considered.

Identify risks early.

Design for scale from day one.

Always optimize for long-term maintainability rather than quick fixes.

Treat this as a real venture-backed startup that aims to become the leading Smart Digital Identity and Customer Engagement Platform in Africa.

Our immediate goal is **Sprint 0: Discovery & Planning**. Do not proceed beyond Sprint 0 until every major business, product, technical, and strategic question has been answered, documented, and agreed upon. Once Sprint 0 is complete, present a comprehensive project blueprint and wait for my approval before beginning Sprint 1.
